1. INTRODUCTION

Royal Decree-Law 13/2010, of December 3, has introduced an important modernization process, dividing the airport and air navigation management functions that in Spain had been performed by the Entidad Pública Empresarial Aena, with the objective of improving the efficiency and effectiveness of the Spanish airport system.

Aena Aeropuertos is created within this modernization process and it shall be responsible for the management of the airports which until now had been managed by Entidad Pública Empresarial Aena.

The Council of Ministers on June 3, 2011 approved an agreement which authorizes the asset transfer from Aena to Aena Aeropuertos and a rise in the capital stock of the new company. These measures are necessary for Aena Aeropuertos to start functioning effectively, from June 8, 2011.

Aena Aeropuertos shall carry out all the duties and obligations developed by Entidad Pública Empresarial Aena until June 7, 2011 as regards management and operation of airport services, and any others that national or international law gives to the airport operator, in relation to the network integrated by airports and heliports managed by Aena.

P: Total amount to pay for the service.

p_1 : unit rate for the time in position at air bridge.

p_2 : unit rate for the aircraft's weight and time at the air bridge.

T_m : maximum take-off weight of the aircraft, in tons.

F_t : time that the aircraft remains at the air bridge, per 15 minutes or period.

Unit rates for p_1 and p_2 are shown in the table below:

For those aircrafts connected to two or more air bridges simultaneously, and parked in apron positions specially designed for this purpose, rates will be reduced by 75% for each additional bridge.

Between zero and six, local time, when an aircraft is in an apron position and the operating company requests a remote parking position but at that time that place is not available, or if the airport operator decides not to change it due to operational reasons, the airport shall disconnect the apron service and shall interrupt the computation of time for charging purposes. However, the company will be forced to move the aircraft to a remote parking position when it will be required because there is available position or because the previous reasons have disappeared. Failure to do this and the fact that it cannot be used by any other users, upon request, the rate to apply will be the one that would have been payable if such uses are not made.

EXEMPTION AND INCENTIVES

4. EXEMPTIONS AND INCENTIVES

Exemptions

No aeronautical charges shall be satisfied, referred to in this guide, by the operations performed by the Spanish state aircrafts, aircraft serving for autonomous communities and other local entities, provided that they perform non commercial public services, and foreign State aircrafts, in the case that the Nations to which they belong have similar exemption for Spanish state aircrafts.

Incentive for operations on certain days of the week in the Canary Airports

There is a right to a subsidy of 50% of the amount of landing and passengers charges, for flights in airports in the Canary Islands - with the exception of inter island flights- the days of the week that are reflected in the following table, provided that the beneficiary of the subsidy maintains the number of operations already scheduled for the remaining days of the week, at the deadline set by the industry for the return of slots of the winter season (August 31) and summer (January 31) accordingly.

Airport	Day of the week
Fuerteventura	Tuesday and Friday
Gran Canaria	Tuesday
La Palma	All days
Lanzarote	Wednesday
Tenerife Norte	Saturday
Tenerife Sur	Thursday

The enjoyment of this subsidy shall exclude the application of bonus for landing and passengers charges under Law 21/2003, Sections 75.7 and 78.3.

The subsidy must be requested during the month of January 2020, and will be met by Aena S.A. offsetting the amount to any amounts owed by the beneficiaries and, if it cannot be possible in whole or in part, by payment in cash before May 31, 2021.

Commercial incentive for 2019 Summer and Winter seasons.

There will be an incentive per season, as defined in Law 21/2003, to promote the start of routes to new destinations at both, short and medium haul, and long haul.

Air carriers operating in Spanish airports managed by Aena S.A. are entitled to get an incentive for their contribution to the growth of passengers on routes operated from Aena airports with less than 3 million passengers annually.

Furthermore, air carriers will be entitled to get an incentive for their contribution to the growth of passengers on long-haul routes operated from Aena airports.

The incentives of the above paragraphs will be calculated as an amount equivalent to 75% of the average passenger charge for the air carrier on the route per season, and will be applied to the additional passengers on the route per season compared to the previous equivalent one. The incentive will be proportional to the contribution of each air carrier to the growth generated in the

route. Additionally, if, in the following equivalent season, the air carrier at least maintains the number of departing passengers on that route, an additional 25% discount will be applied.

In all the above situations, the number of passengers considered for the incentive of each air carrier will have the cap on the number of passengers that the airline has grown at the airport. In this case their distribution by route will be proportional to the contribution of the air carrier to the growth of each route.

In addition, for each air carrier, the number of passengers considered at the network level will not be higher than its growth in the network of Aena S.A.. In this case, their distribution by route will be proportional to the passengers referred to in the previous paragraph.

Finally, for routes with origin at airports where a mechanism for reducing the seasonal variation is applied, as it is stated in law 21/2003, there is also an incentive for the contribution to the growth of passengers on routes operated in the previous equivalent off-peak season.

The incentive of the previous paragraph will be equivalent to 5% of the average amount of the passenger charge of the airline on the route and will apply exclusively to the number of additional departing passengers of the route during the off-peak season, compared to the previous off-peak season. The incentive will be proportional to the contribution to the growth generated in that route.

In addition, if in the following off-peak season the airline at least maintains the number of departing passengers on that route, an additional 5% of the amount of the passenger charge of the airline will be paid.

In the previous case, for each airline, the number of passengers considered for the incentive will not be higher than the growth of the company at the airport and the distribution by route of the number of passengers will be proportional to the contribution of the airline to the growth of each route.

For the Canary Island airports, the incentive will be applied to the amount of passenger charge once applied subsidies for operations on certain days of the week in the Canary Airports, regulated by Law 2/2012.

The growth of each airline cannot be due to the mere transfer of passengers between companies within the same group, or agreements between airlines to share their program or align strategies in order to have access to the incentive. For these purposes, Aena will assess whether the increase in passengers of an airline is because some of the above reasons, and has the power to nullify the incentive if it were so

For the purpose of this incentive, a route is defined as the set of operations of commercial air transport of passengers, departing from an airport of Aena S.A and destination another airport. It will be considered as the same route to the same destination, the one that even if it is operated to different airports, these are part of the same catchment area

For the purpose of this incentive it is considered that a route to a destination has not been operated in the previous equivalent season if it did not exceed 1.000 departing passengers in the winter season or 1.500 in the summer season. In this sense, to be considered a route operated in a season, the route to a certain destination must exceed 1.000 departing passengers in the winter season and 1.500 in the summer one.

For the purpose of the corresponding incentive, a route will be considered as long-haul when the destination is outside the EEA and the orthodromic distance to it is more than 4.000 km.

The incentives must be requested during the following month to that in which the season that generates the right to the incentive, finishes. It will be paid by Aena by compensating its amount with any other amounts owed by the beneficiaries and, if this is not possible, in whole or in part, by payments in cash before the end of the month of June of the following year to that of the beginning of the seasons that generated the right to the incentive.

To receive the incentive, the air carrier must be up to date with payments to Aena S.A
